

AUDIO/VIDEO COMPONENT NETWORKING SYSTEM AND METHOD

ABSTRACT OF THE DISCLOSURE

An audio/video (A/V) component networking system comprises a sink component adapted to be communicatively coupled between a source component and a presentation device for displaying A/V program data and an A/V menu data stream associated with the source component on the presentation device based on a user request transmitted from the sink component to the source component. The sink component is adapted to automatically select at least one of a plurality of different types of communication networks for obtaining the A/V program data and the A/V menu data stream from the source component.
